

Xyte welcomes INOGENI to its growing ecosystem of enterprise workplace collaboration devices

Integration extends Xyte's AI-powered device management platform with cloud visibility and actionable insights for INOGENI's professional USB and AV connectivity solutions.

Las Vegas – June 4, 2026 – Xyte, creator of the first AI-powered cloud platform for enterprise teams, integrators, and manufacturers to manage connected devices at scale, today **announced that INOGENI**, the Canadian manufacturer renowned for engineered-and-manufactured-in-Canada professional USB and AV connectivity solutions, has joined the Connect+ ecosystem with the INOGENI Maestro Cloud Device monitoring and management. The integration is designed for enterprise IT and workplace teams seeking centralized visibility, governance, and reliability across global collaboration environments.

Xyte's award-winning ecosystem is the industry's first open, vendor-agnostic cloud platform that unifies AV, UC, and IT device orchestration with room and space analytics, commerce, and more. By bringing together manufacturers, integrators, MSPs, and end customers on a single, collaborative platform, Xyte eliminates siloed monitoring tools, streamlines support workflows, and drives operational performance across global device fleets, delivering a true single pane of glass for managing connected workplace technology at scale.

With the new **INOGENI Maestro Cloud** powered by Xyte, customers will gain seamless cloud visibility into a broad portfolio of high-performance collaboration devices, starting soon with the **TOGGLE ROOMS**, followed by TOGGLE ROOMS XT BYOD/BYOM switchers and U-BRIDGE USB-C, to be followed later by other products. These solutions will now be

centrally monitored and managed through Xyte, enabling integrators and IT teams to proactively track device status, firmware health, connection quality, and room readiness across distributed meeting room environments. The integration also enables data-driven insights that support smarter capacity planning, faster root-cause analysis, and continuous improvement for enterprises, integrators, and manufacturers alike.

By unifying audio, video, USB, IP, and room technologies on the same AI-powered infrastructure, Xyte strengthens its position as the cloud platform for managing next-generation collaboration spaces while extending the operational value of INOGENI's reliability-driven, compatibility-by-design products.

*"We're thrilled to welcome INOGENI to our expanding ecosystem, helping integrators and enterprises improve service quality, reduce support effort, and unlock the full value of connected collaboration technology," said **Omer Brookstein, CEO and co-founder of Xyte**. "This is the type of cross-manufacturer innovation our customers have been asking for, and we are proud to enable it."*

*"Joining the Xyte Connect+ ecosystem allows INOGENI to extend the value of our Canadian engineered and manufactured connectivity solutions with intelligent cloud monitoring and actionable insights," said **Sylvain Caya, President of INOGENI**. "Together, we are empowering integrators and end-users with improved reliability, faster deployment, and greater operational efficiency across meeting room infrastructures."*

Industry recognition

The rapid adoption of Xyte Connect+ has been recognized with multiple industry awards, highlighting Xyte's commitment to scalability, operational excellence, and the delivery of measurable value to integrators and enterprise customers.

About XYTE

Xyte delivers comprehensive benefits to the entire AV ecosystem by providing a single interface to manage all AV, UC, and intelligent building devices and spaces in the cloud. Leveraging AI-powered automation, Xyte enables in-house AV and IT departments to gain full visibility over their entire device fleet, reducing downtime, minimizing business interruption risk, and extending device lifespans.

System integrators and dealers LEVERAGE Xyte to launch and expand their managed services business, creating recurring revenue streams through proactive, AI-driven support and comprehensive device monitoring. Hardware manufacturers use Xyte's award-winning device management and commerce platform to connect their products to the cloud, remotely manage and support those devices, introduce premium feature upgrades, and build a foundation for powerful new subscription models.
