

INOGENI TOGGLE ROOMS

User guide

Version 0.3

March 15, 2024

VERSION HISTORY

Version	Date	Description
0.1	January 17, 2024	Preliminary user guide for device launch.
0.2	January 24, 2024	 Added new options to set built-in EDIDs Updated RESTAPI and serial commands for EDID and EDIDUSR.
0.3	March 15, 2024	- Updated the connectivity diagram

TYPICAL APPLICATIONS

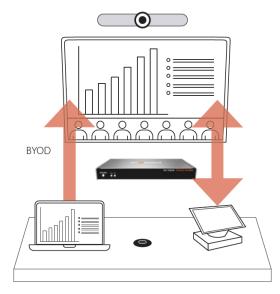

Here is a typical connection diagram used for the TOGGLE ROOMS device in a videoconferencing setup.

ROOM PC MODE WITH BYOD CONTENT SHARING

In this mode, only the Room PC USB and HDMI connections are routed to the main USB and HDMI peripherals.

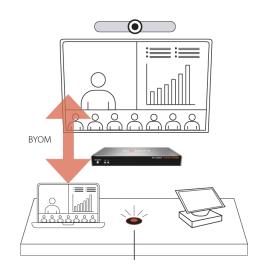

The Room PC is the system that is currently selected to the main USB and HDMI peripherals. However, if the user would like to send HDMI content from the laptop's USB-C or HDMI connection to the Room PC, it is possible to do so with the HDMI SHARE output connection.

BYOM MODE

In this mode, the laptop is the system that is currently selected to the main USB and HDMI peripherals. The Room PC is completely disconnected from the setup.

Here is a simple block diagram to better understand the usage of the product.

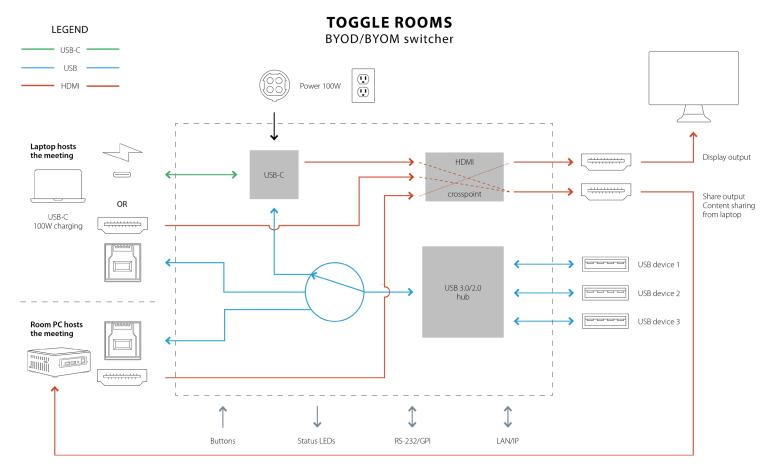

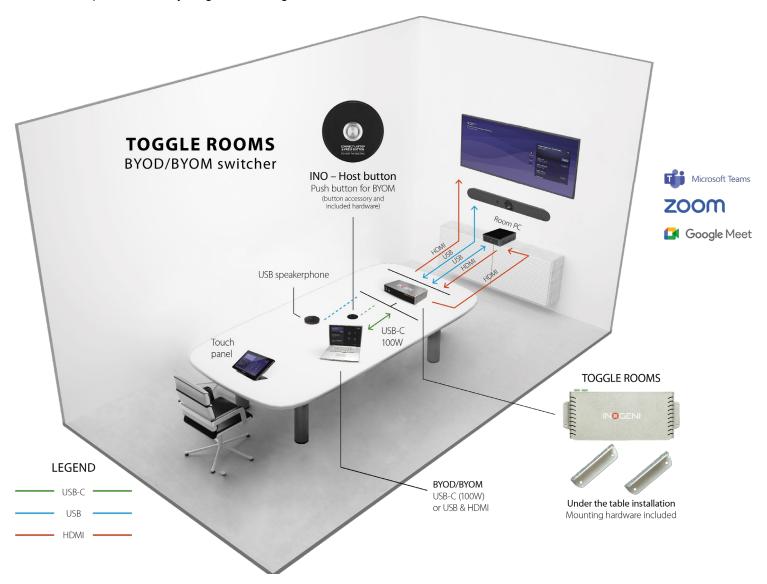

Figure 1: Basic block diagram

CONNECTIVITY DIAGRAM

Here is a simple connectivity diagram showing

DEVICE INTERFACES

Here are the devices interfaces.

Figure 2: Front side connections

Figure 3: Back side connections

	ltems
1	LAPTOP HOST THE MEETING button. This button will connect HDMI and USB peripherals to the laptop connection for BYOM.
2	PWR and charging status leds.
3	24VDC power input.
4	USB-C laptop connection.
5	USB-B laptop connection.
6	HDMI laptop connection.
7	USB-B Room PC connection.
8	HDMI Room PC connection.
9	USB devices.
10	HDMI share output from laptop.
11	HDMI display output.
12	LAN interface.
13	RS232 and remote interface.
14	GPI/button interface.

LEDS BEHAVIOR

Here are the LEDs behavior:

LAPTOP HOSTS THE MEETING	
OFF	Laptop not selected.
SOLID	Laptop selected.
BLINK	 Error condition. When the user tries to switch to laptop if this one is not present or if USB or HDMI connections are missing. When the user tries to switch host if button is locked through our API.
PWR	
OFF	Device not powered.
SOLID	Device powered.
Charging -	
OFF	Laptop is not charging.
SOLID	Laptop is charging.

OPERATING MODES

There are the operating modes supported by the device. They will be explained here.

AUTOMATIC

This is the default mode. This mode will switch automatically to the last source (USB or HDMI) connected if the operation mode is set to BYOM. If the current source is disconnected, the device will switch back to the other source if it is detected. Push-button action and remote control are also supported.

MANUAL

The manual mode will enable you to force a specific source selection. Push-button action and remote control are also supported.

MANUAL WITH FALLBACK

The manual mode with fallback supports the same features as the manual mode. It will only add the possibility to switch to the other detected source connection automatically if the selected source is disconnected.

SPECIFICATIONS

Here is the complete specification.

Physical details	
Dimensions (W x L x H)	25.11 cm x 10.97 cm x 3.26 cm 9.89" x 4.32" x 1.28"
Weight	770g
Power supply	160W (85-264VAC 50/60Hz to 24V/6.67A DC)
Power supply dimensions (W x L x H)	175 mm x 72 mm x 35 mm 6.89" x 2.83" x 1.38"
Package contents	1 x Toggle Rooms 1 x USB-C to USB-C cable – 6ft 1 x USB3.0 cable (USB-A to USB-B) – 3ft 2 x terminal block 4-pos 2 x mounting brackets 4 x M2.5 mounting screws for brackets on product 4 x screws for Toggle Rooms table/wall mount 1 x 24V/160W PSU 1 x AC power cord 1 x country-specific power plug (USA/CA or EU/UK/AU/BIS) 1 x PSU mounting brackets 4 x screws for PSU table/wall mount 1 x quickstart guide 4 x rubber feet
Operating temperature	0° to 45° C (32° to 113° F)
Storage temperature	-40° to 105° C (-40° to 221° F)
Relative humidity	0% to 90% non-condensing
Mounting options	Ability to mount under the table or on a wall.
UPC code	051497418694
Origin	Canada
Warranty	2 years

HOST - LAPTOP	
1x USB-C connector	Supports USB-C DisplayPort Alternate Mode - DisplayPort up to 3840x2160p60 / 4096x2160p60 - USB3.0 (USB 3.1 Gen 1 / 5 Gbps) - USB2.0 (480 Mbps) - Charging up to 100W - USB-C cable locking option
1x USB connector	USB 3.0 Type-B
1x HDMI connector	Up to 3840x2160p60 / 4096x2160p60 Cable locking option.

HOST - ROOMPC	
1x USB connector	USB 3.0 Type-B
1x HDMI connector	Up to 3840x2160p60 / 4096x2160p60. Cable locking option.

HDMI DISPLAY output	
Resolution	Up to 3840x2160p60 / 4096x2160p60.
Connector	HDMI with cable locking option.

HDMI SHARE output	
Resolution	Up to 3840x2160p60 / 4096x2160p60.
Connector	HDMI with cable locking option.

USB devices	
Connectors	3 x USB3.0 Type-A ports.
Power	1.8A shared between downstream ports.

Control	
Control options	Front button – for laptop selection RS232 GPI LAN USB
IP interface	10/100Mbps Supports DHCP or static addressing. IP control available through RESTAPI and telnet connections.
RS232 interface	4-pos terminal block connector Baud rates: 9600 [default], 19200, 38400 and 115200 Data bits: 8 Stop bits: 1 Parity: None Flow control: None
GPI interface	4-pos terminal block connector 2x Contact-closure control. GPI: - Controlled by open-drain IO (short to ground) or driven IO. - Supported voltage range: 0 to 12V max. - Voltage threshold is 2.3V. VOUT: - Able to power up the led on the button of our INO-Button accessory. - Logic-low level: 0 @ 0.5V - Logic-high level: 4.5 @ 5V

HDMI video	
HDCP compliance	Compliant with HDCP2.3, HDCP2.2 and HDCP1.4
HDMI compliance	Compliant with HDMI2.0b, HDMI1.4 and DVI1.0
Sampling frequency	600MHz
Video scaling	Crosspoint switch supports video downscaling from 4K to 1080p.
Chroma subsampling	YUV/RGB 4:4:4, 4:2:2
CEC	Ability to send CEC commands to connected HDMI display sink.

HDMI audio	
Audio	Audio passthrough from input to output
Formats	LPCM, Dolby Digital, DTS up to 192kHz

Certifications				
Device FCC, CE, UKCA, RoHS, IEC62368, RCM, SoV				
Power supply	FCC, CE, UKCA, RoHS, IEC62368, RCM, CCC, CB, EAC, VI, UL			
TAA-compliance	Yes			

Compatibility	
Operating system	NO driver installation necessary Windows 7 and above (32/64-bit) macOS 10.10 and above Linux (kernel v2.6.38 and above)

SERIAL COMMUNICATION PROTOCOL

Here is the complete list of commands provided through the serial connection. As written on the back of the device, here is the pinout of the terminal block.

Pin 1: Receive Pin 2: GND Pin 3: Transmit

Pin 4: 5V supply (for INOGENI Remote)

NOTE: The user needs to put a space character between the command name and argument.

ARG	Lists all the available options for the arguments to be used with the command.
RX	When command does not have any argument or only first argument is provided, it will return information from the device.
TX	When command have all arguments, it will apply the configuration to the device.

You need to add a carriage return <CR> character and a line feed <LF> character at the end of the command string.

Typically, commands will return "ACK<CR><LF>" in case of success and "NACK<CR><LF>" in case of failure.

Baud rate: 9600 [default] // Data bits: 8 // Stop bits: 1 // Parity: None // Flow control: None

Command	REQ/ ARG	Arguments	Return
Return commands list with description.	RX	N/A	List of all the supported commands.
RSTR Restore default settings (including password and REST API token).	RX	N/A	ACK <cr><lf></lf></cr>
REBOOT Reboot the device.	RX	N/A	ACK <cr><lf></lf></cr>
Return firmware version.	RX	N/A	MAJOR= <integer><cr><lf> MINOR=<integer><cr><lf> ACK<cr><lf></lf></cr></lf></cr></integer></lf></cr></integer>
Return laptop and RoomPC information, display and share output timings.	RX	N/A	List of all the status of the device.
USBHOST Get/Set USB host to use.	ARG	<pre><host> options: 0 => RoomPC 1 => Laptop USB-C 2 => Laptop USB-B 3 => OFF</host></pre>	
	TX	<host></host>	ACK <cr><lf> USBHOST=<host><cr><lf> ACK<cr><lf></lf></cr></lf></cr></host></lf></cr>

REST API

You can enable a bearer authentication in the HTTP header (Authorization: Bearer <token>) through our configuration page to increase security on the API.

There will be a return code to each call with the following commands:

```
200 => success
400 => error
401 => authorization error
```

ARG	Lists all the available options for the arguments to be used with the command.
RX	When command does not have any body arguments or only first argument is provided, it will return information from the device.
TX	When command have all body arguments, it will apply the configuration to the device.

The return body will usually be JSON formatted with a "message" field containing a JSON string explaining the cause of the error or "success" in case of success. Note that we are using self-signed certificates.

Here is the complete list of commands supported through the REST API (excluding password change, firmware update, bearer token get/set):

Command URL / Description	REQ/ ARG	Body arguments	Return body
https:// <ip>/api/v1/help Return commands list with description.</ip>	RX	N/A	JSON object with multiple fields
HTTP GET/POST https:// <ip>/api/v1/rstr Restore default settings (including password and REST API token).</ip>	RX	N/A	<pre>{ "message": <string> }</string></pre>
HTTP GET/POST https:// <ip>/api/v1/reboot Reboot the device.</ip>	RX	N/A	<pre>{ "message": <string> }</string></pre>
https:// <ip>/api/v1/version Return firmware version.</ip>	RX	N/A	<pre>{ "major": <integer>, "minor": <integer> }</integer></integer></pre>
https:// <ip>/api/v1/status Return laptop and RoomPC information, display and share output timings.</ip>	RX	N/A	JSON object with multiple fields
HTTP GET/POST	ARG	<usbhost> options: 0 => RoomPC 1 => Laptop USB-C 2 => Laptop USB-B 3 => OFF</usbhost>	
https:// <ip>/api/v1/usbHost Get/Set USB host to use.</ip>	TX	usbHost= <host></host>	<pre>{ "message": <string> }</string></pre>
	RX	N/A	<pre>{ "usbHost": <host>, "message": <string> }</string></host></pre>

Command URL / Description	REQ/ ARG	Body arguments	Return body
HTTP GET/POST https:// <ip>/api/v1/ displaySrc</ip>	ARG	<pre><displaysrc> options: 0 => RoomPC 1 => Laptop USB-C 2 => Laptop HDMI 3 => OFF</displaysrc></pre>	
Get/Set which HDMI source to be routed to display output.	TX	displaySrc= <src></src>	<pre>{ "message": <string> }</string></pre>
Touted to display output.	RX	N/A	<pre>{ "displaySrc": <src>, "message": <string> }</string></src></pre>

Command URL / Description	REQ/ ARG	Body arguments	Return body
httpEn Get/Set HTTP control setting.	TX	enable= <enable></enable>	{ "message": <string> }</string>
Copertiff Control Setting.	RX	N/A	<pre>{ "enable": <enable>, "message": <string> }</string></enable></pre>

It is also possible to embed arguments to an API call inside the URL to ease configuration with some control systems with the following topology:

GET https://<IP>/api/v1/<COMMAND>?<ARG1>=value &<ARG2>=value

where <COMMAND>, <ARG1> and <ARG2> are command and associated arguments.

For example, using the usbHost command, you can issue the following request:

GET https://<IP>/api/v1/usbHost?host=1

This request will set the USB host to laptop USB-C port.

The following commands allow to perform password management and bearer token management. The authentication used is basic auth, and we use the same user and password as the webpage (default user=admin and password=[SERIAL_NUM] where [SERIAL_NUM] is the serial number of the device located under the unit).

https:// <ip>/api/v1/</ip>		"token": <string></string>
getAccessToken		}
Return the bearer token.		If no bearer token is set, the "token" field will be null.
HTTP POST		{
https:// <ip>/api/v1/</ip>		"message": <string></string>
generateAccessToken		}
Generate random access token.		

The bearer token is generated using a random process. The format of the bearer token only supports the following:

- Alphanumeric (A to Z) upper and lowercase characters.
- **Numbers** 0-9.

TELNET

You can use any telnet application in order to communicate with the device using TCP. Make sure to use the right IP address and **port 23**. You can configure the telnet connection with a username/password to increase security.

Use the serial communication protocol to configure the device.

The quit command can be used to ask server for disconnection.

INOGENI MAESTRO APPLICATION

You can use our INOGENI Maestro application to monitor firmware information and upgrade your unit.

NOTE: You need to use the USB-B to USB-A cable provided with the box for the Maestro application to detect the unit.

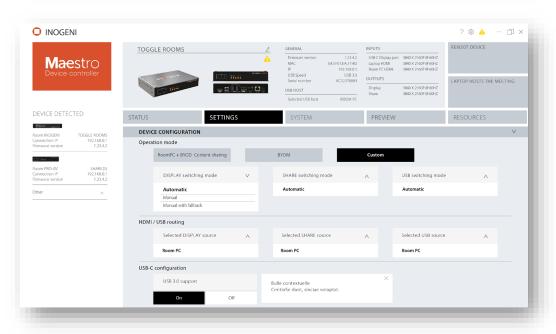

Figure 4: INOGENI Maestro application preview

You can find the mechanical specification of the device. All dimensions are in mm [in].

Switch	Position	Description
SW1	OFF ON	- For future use.
SW2	OFF ON	- For future use.
SW3	OFF ON	- For future use.
SW4	OFF ON	- For future use.
SW5	OFF ON	- Reserved.
	OFF	Disable 5V on terminal block
SW6	ON	Enable 5V on terminal block. This switch must be set to power up the connected remote.

TROUBLESHOOTING SECTION

Here is the troubleshooting section for the device.

Problem	Resolution
My laptop is not charging using my USB-C cable.	Check if the cable is rated to support USB-C power delivery. Also check if the cable used is among the ones that we already support. Visit https://inogeni.com/product/toggle-rooms/ for the complete list.
The device does not automatically switch USB host and HDMI source.	By default, the device is operating in "RoomPC with BYOD / content sharing" mode to avoid disruption of a current video meeting. See "Operation mode" API to properly set the operation you need.

SUPPORT

Engineered by video professionals, for video professionals, it is your most compatible USB 3.0 device. INOGENI expertise at your fingertips:

- Expert Technical Support team at support@inogeni.com for immediate help or if you have any technical guestion about our products.
- Extensive Knowledge Base to learn from other customers' experiences.

CERTIFICATIONS

FCC Radio Frequency Interference Statement Warning

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received including interference that may cause undesired operation.

IC Statement

This Class A digital apparatus complies with Canadian CAN ICES-3(A)/NMB-3(A).

CE Statement

We, INOGENI Inc., declare under our sole responsibility that the Toggle Rooms, to which this declaration relates, is in conformity with European Standards EN 55032, EN 55035, and RoHS Directive 2011/65/EU + 2015/863/EU.

UKCA Statement

This device is compliant with the Electromagnetic Compatibility Regulations 2016 No. 1091 as part of the requirements leading to the UKCA marking.

WEEE Statement

The European Union has established regulations for the collection and recycling of all waste electrical and electronic equipment (WEEE). Implementation of WEEE regulations may vary slightly by individual EU member states. Please check with your local and state government guidelines for safe disposal and recycling or contact your national WEEE recycling agency for more information.

RCM Statement

This device is compliant with Regulator Compliance Mark (RCM) certification.
